

PETSKATE

PETSKATE is an online and offline product aimed at skateboard beginners, turning skateboards into pets and learning in a pet-raising way, through which this product can sustain a niche group's love for the culture.

BACKGROUND

Skateboarding is becoming popular in China

Year-on-year growth

The number of people who skateboard becomes progressively larger with each passing year.

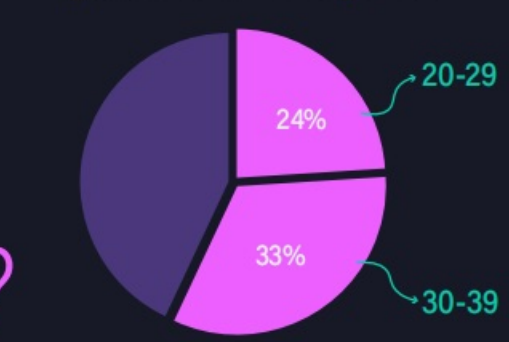

Types of players

The number of people who gave up at each stage varied, with beginners giving up the most.

Why Beginner increased the most, but also with a high abandonment rate?

Age distribution of beginners

Beginner skateboarders are predominantly 20-39

Analysis of skateboard players

Reasons of playing skateboard

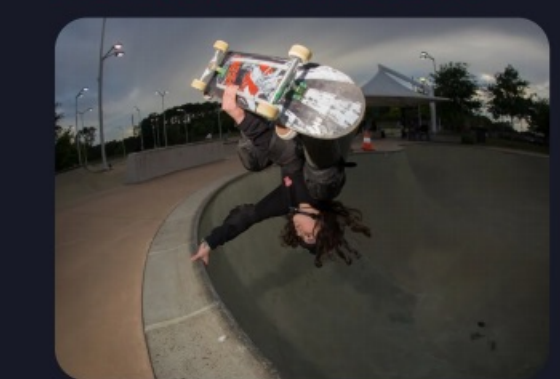

Socialization and a sense of accomplishment are what cause players to give up or not.

Reasons of giving up skateboard

USER TARGET

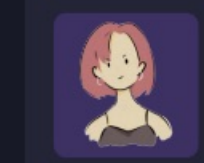

- Beginners aged 20-39
- Stay enthusiastic
- Increased socialising
- Enjoy skateboarding

I want to help beginner skateboarders aged 20-39 to maintain their passion for skateboarding, improve their skateboarding experience and socialise amongst themselves so that they enjoy it more and want to recommend it to others.

PERSONA

Skilled

Chen

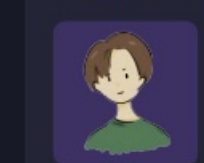

- White collar
- 18 months

- Squares, skatepark
- After work

My friend has been encouraging me that although we are making progress, there is no more promotion.

Beginner

Li

- Student
- 18 months

- Squares, skatepark
- After class

My friend has been encouraging me that although we are making progress, there is no more promotion.

Beginner

Xu

- White collar
- 18 months

- Squares, skatepark
- After work

My friend has been encouraging me that although we are making progress, there is no more promotion.

CASE STUDY

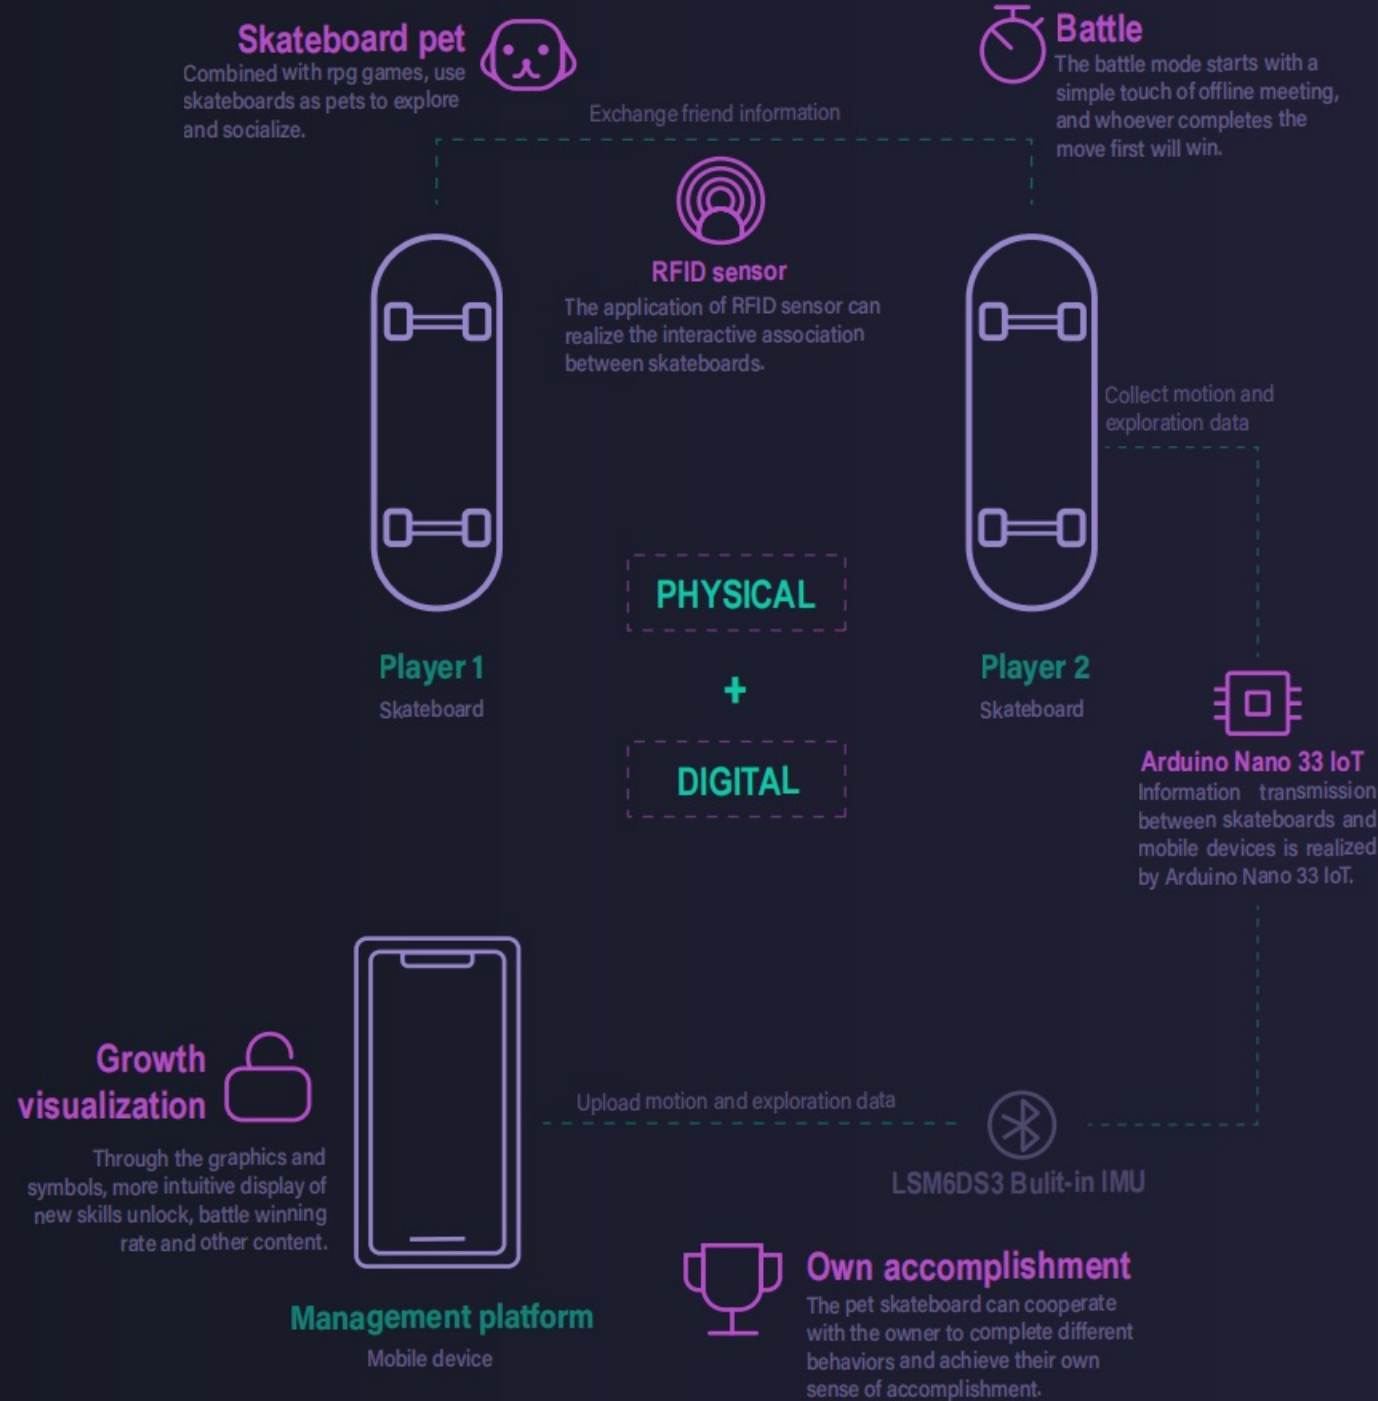

BRAINSTORM

of growth and skateboard

INSIGHT

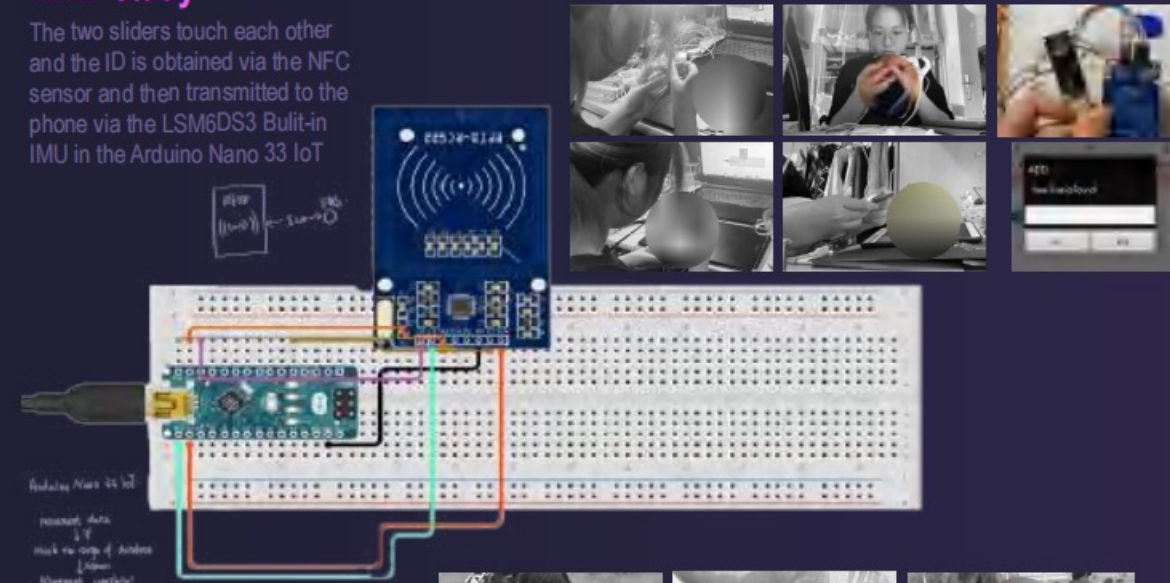

of physical and digital interaction

STIMULATION EXPERIMENT

RFID study

The two sliders touch each other and the ID is obtained via the NFC sensor and then transmitted to the phone via the LSM6DS3 Built-in IMU in the Arduino Nano 33 IoT

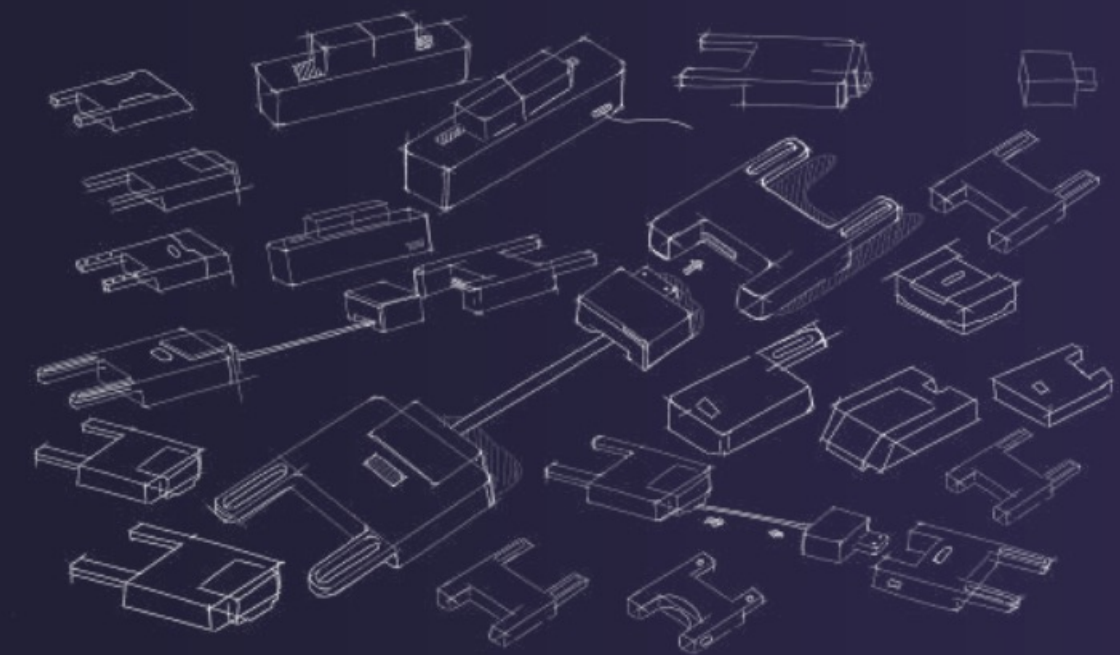

Movement analysis study

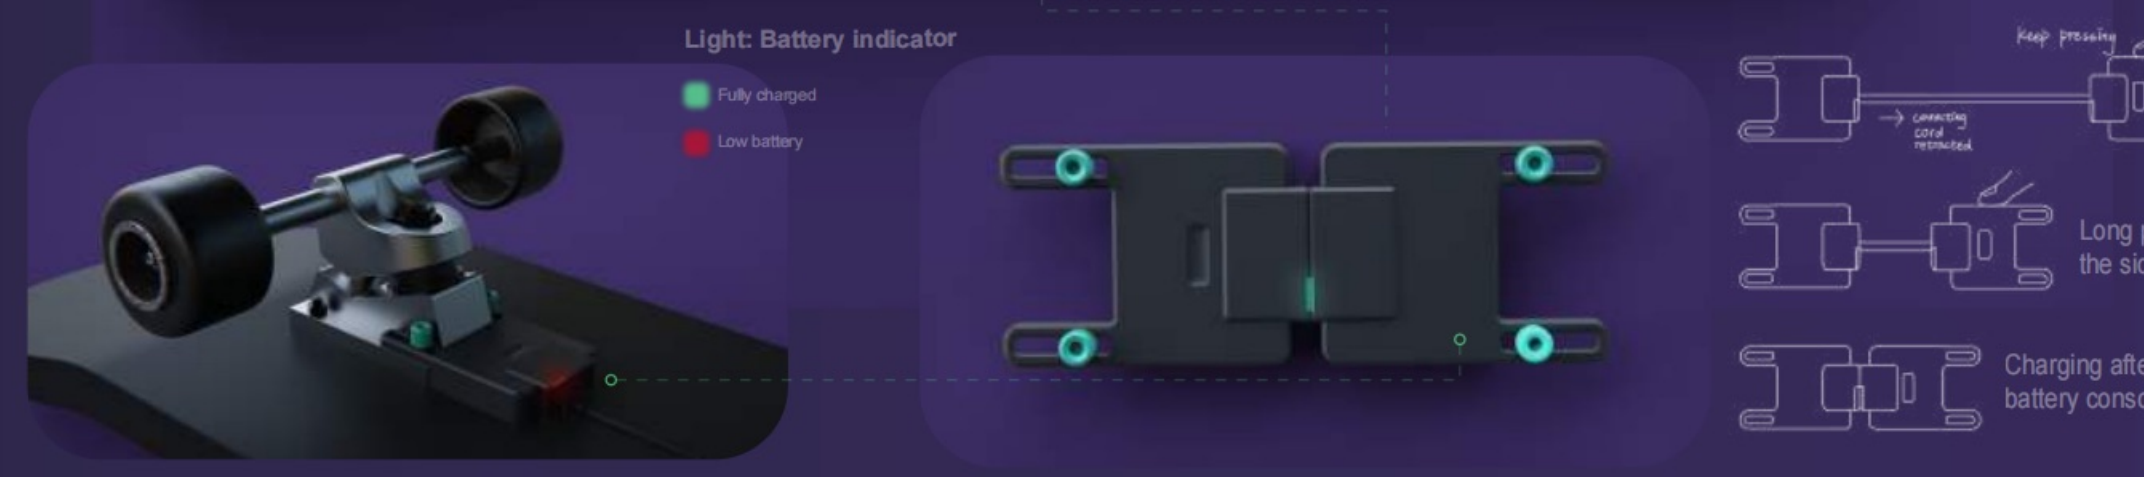

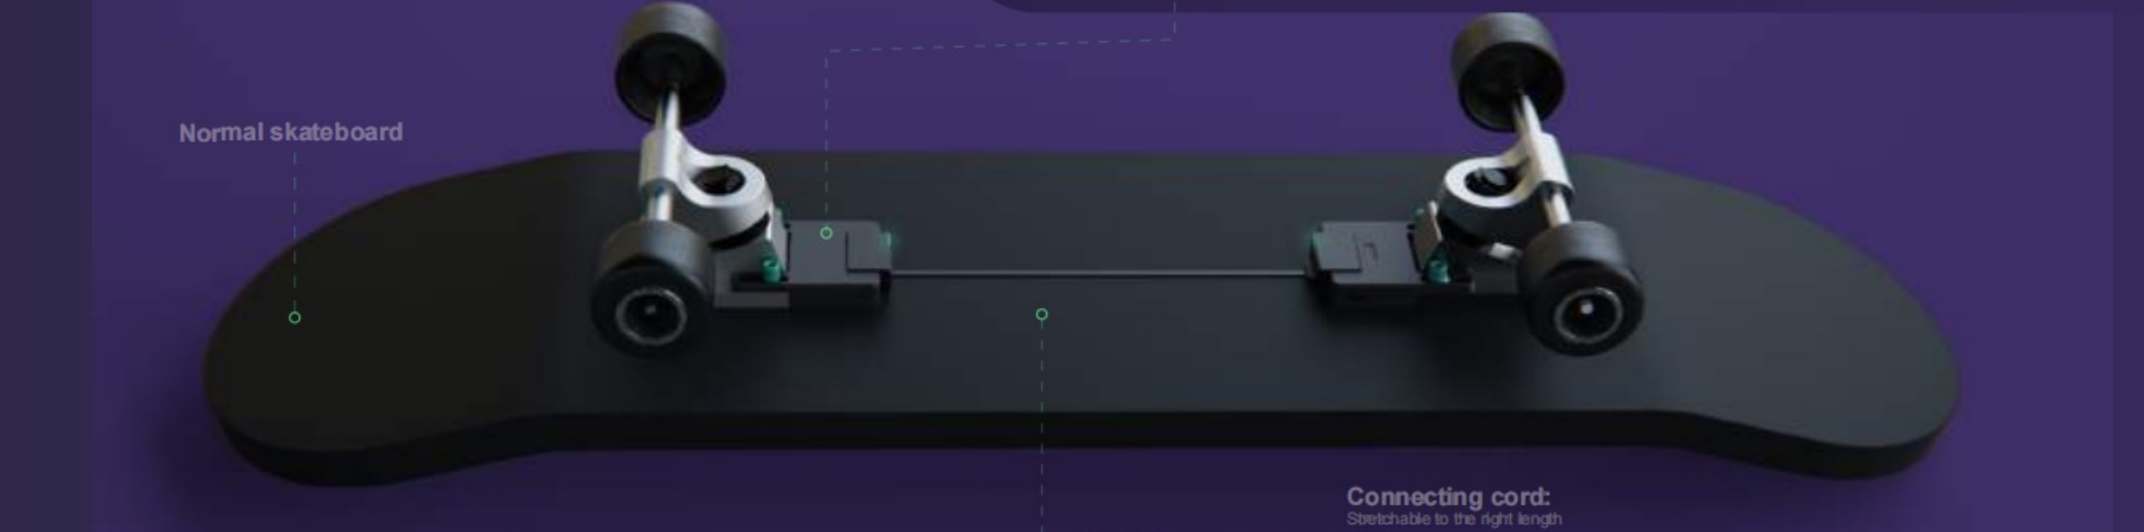

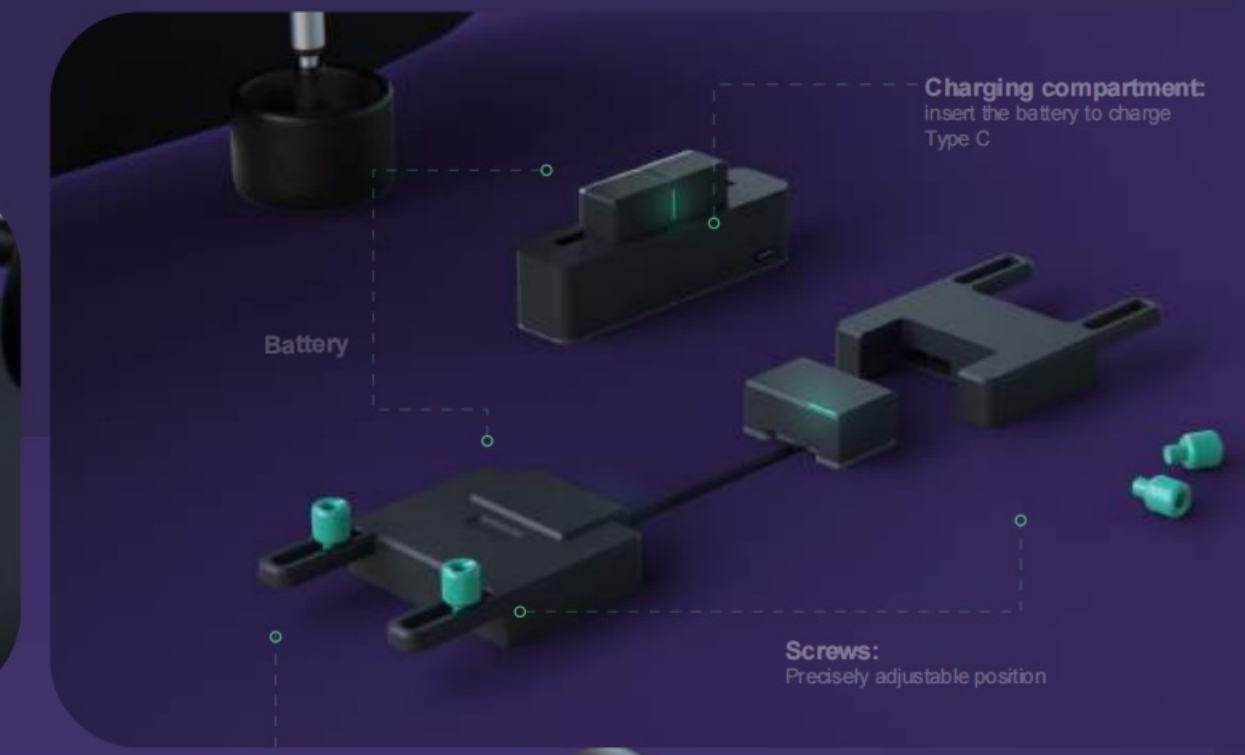

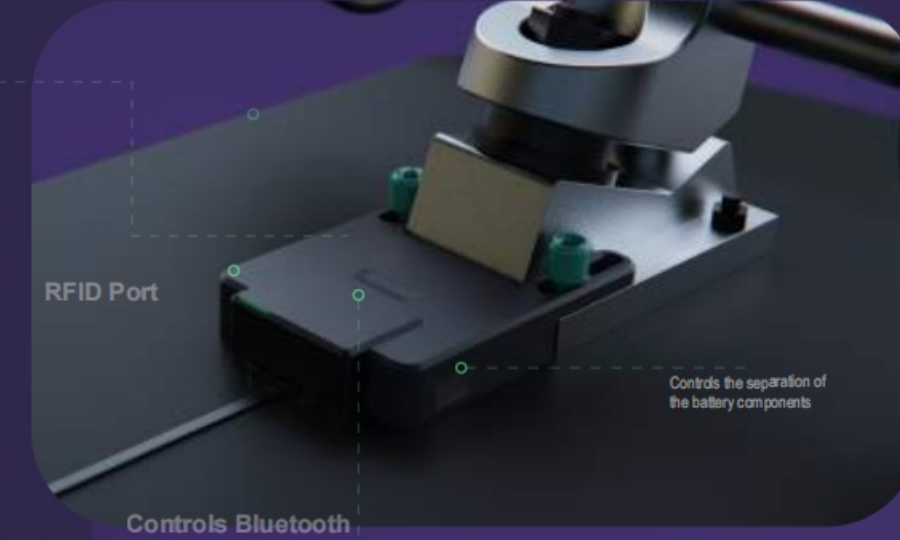

After using the Arduino Nano 33 IoT to calculate the data and obtain the action data, the phone shows that the action has been completed if the data is in range.
